"Pig's Tail"™

PROTECTIVE WRAPPING

USE "PIG'S TAIL"™ FOR:

- ✓ Hydraulic, gas and air hoses/pipes
- ✓ Welding leads
- ✓ Electrical leads
- ✓ Sapling/plant protection

Protect your investment with "Pig's Tail"™ Protective Wrapping. "Pig's Tail"™ is designed for heavy duty bundling and protection, featuring rounded edges for safe and easy installation.

Hydraulic systems are the cornerstone of many industrial processes, providing the power to drive plant and equipment in many diverse applications. A key component of these systems is the hydraulic hose, which if damaged by wear, or accident, can have a major impact on productivity.

The cost of such failure cannot simply be measured in terms of the replacement cost of the hose, but also by the financial impact caused by unplanned equipment downtime and lost production.

"Pig's Tail"™ Protective Wrapping provides a quick and cost effective method for minimising these production losses.

"Pig's Tail"™ is a HDPE (High Density Polyethylene) protective wrapping designed for easy installation to existing hydraulic hoses, providing protection against wear and damage caused by misuse, poor maintenance, or aggressive working environments.

"Pig's Tail"™ Protective Wrapping offers the following performance benefits:

- Developed to increase the service life of hydraulic hoses
- Manufactured from tough HDPE for ultimate protection against abrasive wear and crushing damage
- Unique rounded edges facilitate installation and reduce risk of exposed sharp edges

- Wide range of sizes suits most hose diameters
- Can be used to protect a single hose or to bundle hoses/cables together
- Spiral cut for ultimate flexibility
- Resistant to chemical attack and suitable for use in the most aggressive environments
- Suitable for use with equipment operating across a wide temperature range (-10°C to 90°C)
- Fire resistant and anti-static versions available for use in sensitive environments
- Suitable for use with all hydraulic fluids including glycol and phosphate ester based products.

TYPICAL APPLICATIONS

- Hydraulic hose protection and bundling on static plant and equipment
- fork lift trucks
- mobile plant equipment
- air hoses on trucks and air driven equipment.

TECHNICAL INFORMATION

Hose Armouring & Guarding

INSTALLATION INSTRUCTIONS

Select the correct diameter of "Pig's Tail"™ for the outside diameter of the hose to be protected (*see page five*). Cut the "Pig's Tail"™ to the correct length, ensuring that the ferrule of each end of the hose is covered. Starting at one end of the hose, wrap the "Pig's Tail"™ around the hose, working in the direction of the spiral.

For multiple hose and cable protection, select the diameter by measuring the total diameter of all hoses and cables together, then follow the directions above. For multiple hose protection, it is advisable to leave a short length of hose exposed to reduce putting strain on the ferrules. For bundles of larger diameter hoses, it may be necessary to provide additional support using chains or brackets.

DATA SHEET - Typical properties

The raw material from which "Pig's Tail"™ is produced, is manufactured from high molecular weight extrusion grade polyethylene. The product exhibits extremely good environmental stress crack resistance (ERS) and conforms with the Australian Standard AS2070 – plastic material for food consumption use.

FIRE RESISTANT ANTI STATIC "Pig's Tail"™

FRAS "Pig's Tail"™ is a conductive thermoplastic compound on a polyethylene base. Conductivity is achieved by using special conductive carbon black. In addition to low electrical resistivity, FRAS is flame retardant and has an extremely good balance of mechanical properties.

FRAS "Pig's Tail"™ is available in **BLACK** only.

ELECTRICAL GUARD

GUARD

An alkathene low-
density polyethylene

“Pig’s Tail”™

Electrical Guard is available in –
Natural (indoor use only)
Black (indoor and outdoor use)

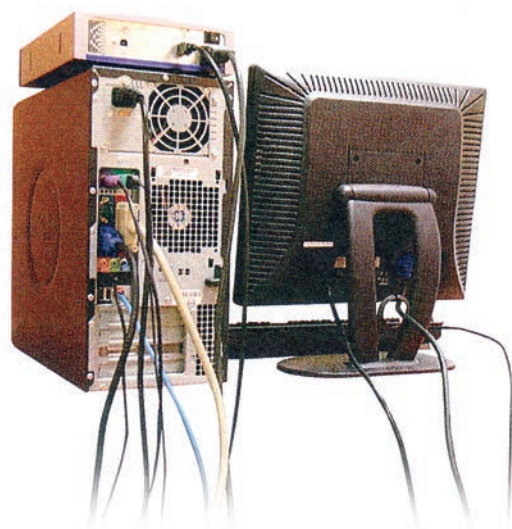

Available in packs from 2m to 10m, boxes from 15m to 100m or spools from 150m to 500m.

Electrical Guard is designed to wrap around bundles of wires to make neat looms and protect the conductors.

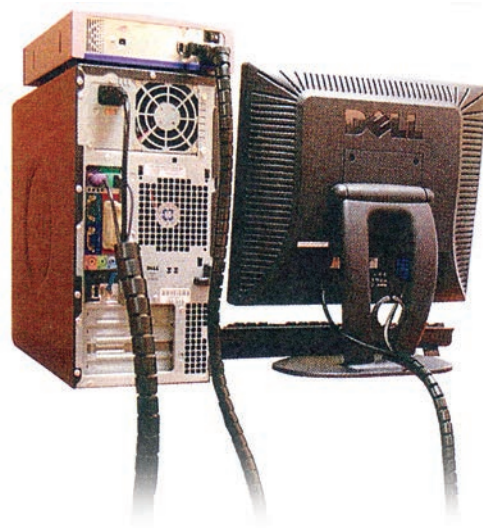

Electrical Guard will accommodate a large range of diameters and allows break outs at any point.

UV stability

Exceeds ASTM-D-4066 with 2.5% carbon black giving nominal 15 yrs normal exposure to UV with less than 10% yield in tensile strength.

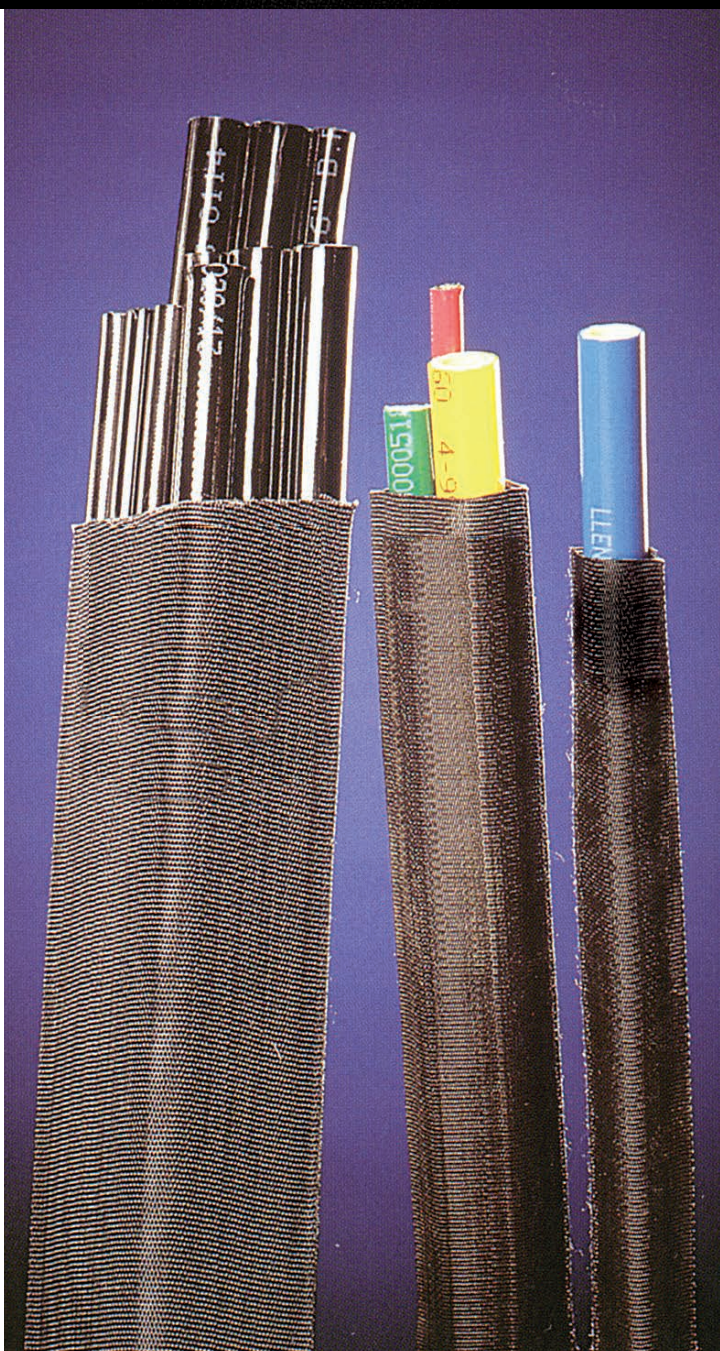

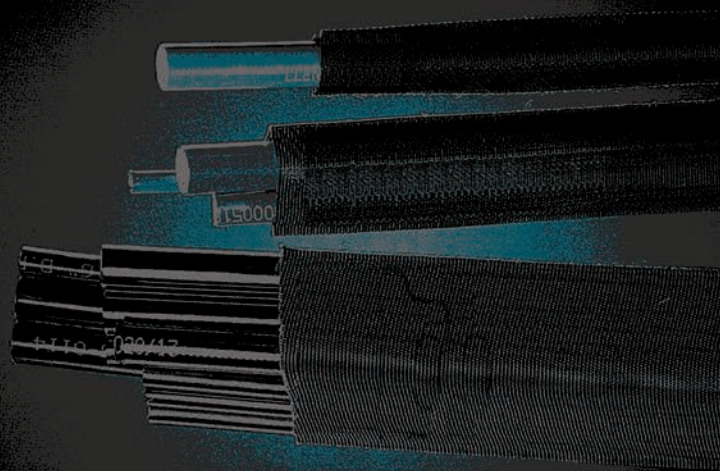

ANTI-ABRASION SLEEVE

This very tough textile sheath is particularly suitable for the hydraulic and pneumatic sectors. It can be used to bundle multiple hoses or used to protect a single hose. Thanks to the toughness of the material used it has optimum resistance to mechanical stress and optimum compatibility with oils and organic products.

Working temperature from -40°C to 70°C

THERMOPLASTIC HOSE

The WR7 series hoses can also be produced, on request, in twin and multiple versions with the same technical features as the single version.

Reference code of single hose followed by
B = 2 hoses, T = 3 hoses, Q = 4 hoses, C = 5 hoses
Example: OL720000B = 2 hoses

• not provided for by the standard SAE 100 R7

THERMOPLASTIC HOSES WR7 SERIES

TECHNICAL-CONSTRUCTIVE FEATURES:

Internal core in thermoplastic polyester, reinforcement in polyester fibre, exterior covering in polyurethane; on request it is also available micro perforated for the passage of air and compatible gases.

APPLICATIONS:

WR7 series hoses have been created for oleodynamic use at medium pressure.

UTILISATION TEMPERATURE:

From -40°C to +100°C

Max. working temperature of air, water and fluids containing water: +65°C

WORKING PRESSURE

As prescribed by SAE standards safety ratio 1:4

SPECIFICATIONS

Hoses are in compliance with standards SAE J517 sec. SAE 100 R7, EN 855, ISO 3949.

THERMOPLASTIC HOSES WR8 SERIES

TECHNICAL-CONSTRUCTIVE FEATURES:

Internal core in thermoplastic polyester, aramidic fibre reinforcement, exterior covering in polyurethane; on request it is also available micro perforated for the passage of air and compatible gases.

APPLICATIONS:

WR8 series hoses have been created for oleodynamic use at high pressure.

UTILISATION TEMPERATURE:

From -40°C to +100°C

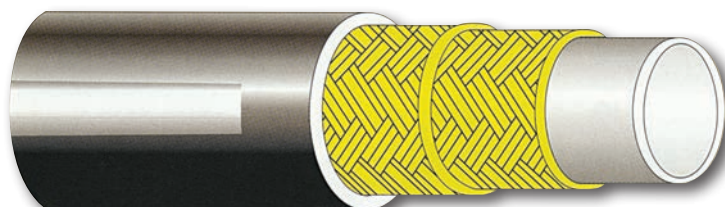

Max. working temperature of air, water and fluids containing water: +65°C

WORKING PRESSURE

As prescribed by SAE standards safety ratio 1:4

SPECIFICATIONS

Hoses are in compliance with standards SAE J517 sec. SAE 100 R8, EN 855, ISO 3949.

The WR8 series hoses are also available in twin version and, on request, multiple versions, with the same technical features as the single version.

Reference code of single hose followed by

THERMOPLASTIC HOSE cont'd

WHP series hoses have been created for oleodynamic use at very high pressure as well as very high pressure application of polyols, solvents and paints.

The WHP series hoses are also producible, on request, in twin and multiple versions, with the same technical features as the single version.

Reference code of single hose followed by
B = 2 hoses, T = 3 hoses, Q = 4 hoses, C = 5 hoses
Example: MTKH30000B = 2 hoses

THERMOPLASTIC HOSES WHP SERIES

TECHNICAL-CONSTRUCTIVE FEATURES:

Internal core in thermoplastic polyester (*polyamide), reinforcement with one or more aramidic fibre braids and a high tensile steel braid, exterior covering in polyurethane; on request it is also available micro perforated for the passage of air and compatible gases.

APPLICATIONS:

WHP series hoses have been created for oleodynamic use at very high pressure.

UTILISATION TEMPERATURE:

From -40°C to +100°C

Max. working temperature of air, water and fluids containing water: +65°C

WORKING PRESSURE

THERMOPLASTIC HOSES WJC SERIES JET CLEANING

TECHNICAL-CONSTRUCTIVE FEATURES:

Internal core in thermoplastic compound, reinforcement with two braids in polyester fibre, exterior covering in anti-abrasion micro-perforated polyurethane.

APPLICATIONS:

WJC series hoses have been created for water applications in the high pressure cleaning sector.

UTILISATION TEMPERATURE:

From -40°C to +55°C

WORKING PRESSURE

Safety ratio 2:5:1

This range of hoses has been developed specifically for jet cleaning and drain cleaning industries with working pressures up to 1120 bar.

TEKNOJET/2SN

JET WASH HOSE

Wire braided reinforced hoses for professional water-cleaning machines.

TECHNICAL FEATURES

OPERATING TEMPERATURE RANGE

-10°C / 150°C

QUALIFIED FLUIDS:

mineral oils, vegetable and rapeseed oils, glycol and polyglycol based oils, synthetic ester based oils, oils in aqueous emulsion, water

TUBE:

water resistant synthetic rubber

REINFORCEMENT:

two high tensile steel braids

COVER:

blue, environment resistant, synthetic rubber

TK-EVERGREEN/2ST

ABRASION RESISTANT HOSES

Wire braided reinforced hoses for medium-high pressure lines and return lines, in severe environmental and abrasion conditions.

TECHNICAL FEATURES

OPERATING TEMPERATURE RANGE

-40°C / +100°C
with peak of +125°C

QUALIFIED FLUIDS:

mineral oils, vegetable and rapeseed oils, glycol and polyglycol based oils, synthetic ester based oils, oils in aqueous emulsion, water, diesel fuel (up to 93°C)

TUBE:

oil resistant synthetic rubber

REINFORCEMENT:

two high tensile steel braids

COVER:

black, synthetic rubber with weather, ozone, heat and abrasion resistance

Matched hose ends available.
